Subject: TI - Attleboro MA - NPDES Permit Info. for Friday call/conference
Attachments: Attleboro Site NPDES Outfall 002A Exceedances_Meeting PPT_Jul 17 2020-2.pdf

David,

Hope you had a good vacation.

Attached is a presentation we would like to go over during our next conference call this Friday in regard to the NPDES Permit at the TI MCP site in Attleboro MA.

The purpose of the presentation is to further assist EPA with understanding the challenges of treating water from bedrock, overburden, groundwater infiltration and site runoff during storm events, and the required sampling time once system has supposedly returned to normal operating conditions, as noted in the current permit.

As noted in the attached, our proposed solution is to include a clause in new NPDES permit that extends the 48 hour wait time to apply when normal operating conditions cannot be achieved in a given month due to extended storm conditions.

We look forward to further discussing this with you on Friday.

Thank you.
